

ABSTRACT

Even in the case of a material producing company that uses common main starting materials and has in-house organizations corresponding to manufacturing processes, appropriate profit-and-loss management by each commercial product type can be realized. A solving method includes: a profit-and-loss storing step of linking at least product type information and profit information to each other by each order of products with order record to be stored in an order record profit-and-loss database; an information search step of accepting specific information on the virtual inter-organ organization and search condition information at least including product type condition, and reading from the order record profit-and-loss database, at least product type information and profit information on an order matching the search condition information and on an order belonging to the virtual inter-organ organization matching the specific information on the virtual inter-organ organization; a profit information aggregating step of sorting the product type information by each product type of a product type classification scale indicated in the product type condition and aggregating profit information corresponding to respective product information sorted by each product type; and a profit-and-loss management information presentation

step of presenting the aggregated profit information by each product type as the profit-and-loss management information.
